

DCU School of Computing Assignment Submission

Student Name(s): Cormac Duggan
Student Number(s): 17100348
Programme: BSc in Computer Applications
Project Title: SSADM Project
Module code: CA214
Lecturer: Renaat Verbruggen
Project Due Date: 10/12/2018

Declaration

I declare that this material, which I now submit for assessment, is entirely my own work and has not been taken from the work of others, save and to the extent that such work has been cited and acknowledged within the text of my work. I understand that plagiarism, collusion, and copying is a grave and serious offence in the university and accept the penalties that would be imposed should I engage in plagiarism, collusion, or copying. I have read and understood the Assignment Regulations set out in the module documentation. I have identified and included the source of all facts, ideas, opinions, viewpoints of others in the assignment references. Direct quotations from books, journal articles, internet sources, module text, or any other source whatsoever are acknowledged and the source cited are identified in the assignment references.

I have not copied or paraphrased an extract of any length from any source without identifying the source and using quotation marks as appropriate. Any images, audio recordings, video or other materials have likewise been originated and produced by me or are fully acknowledged and identified.

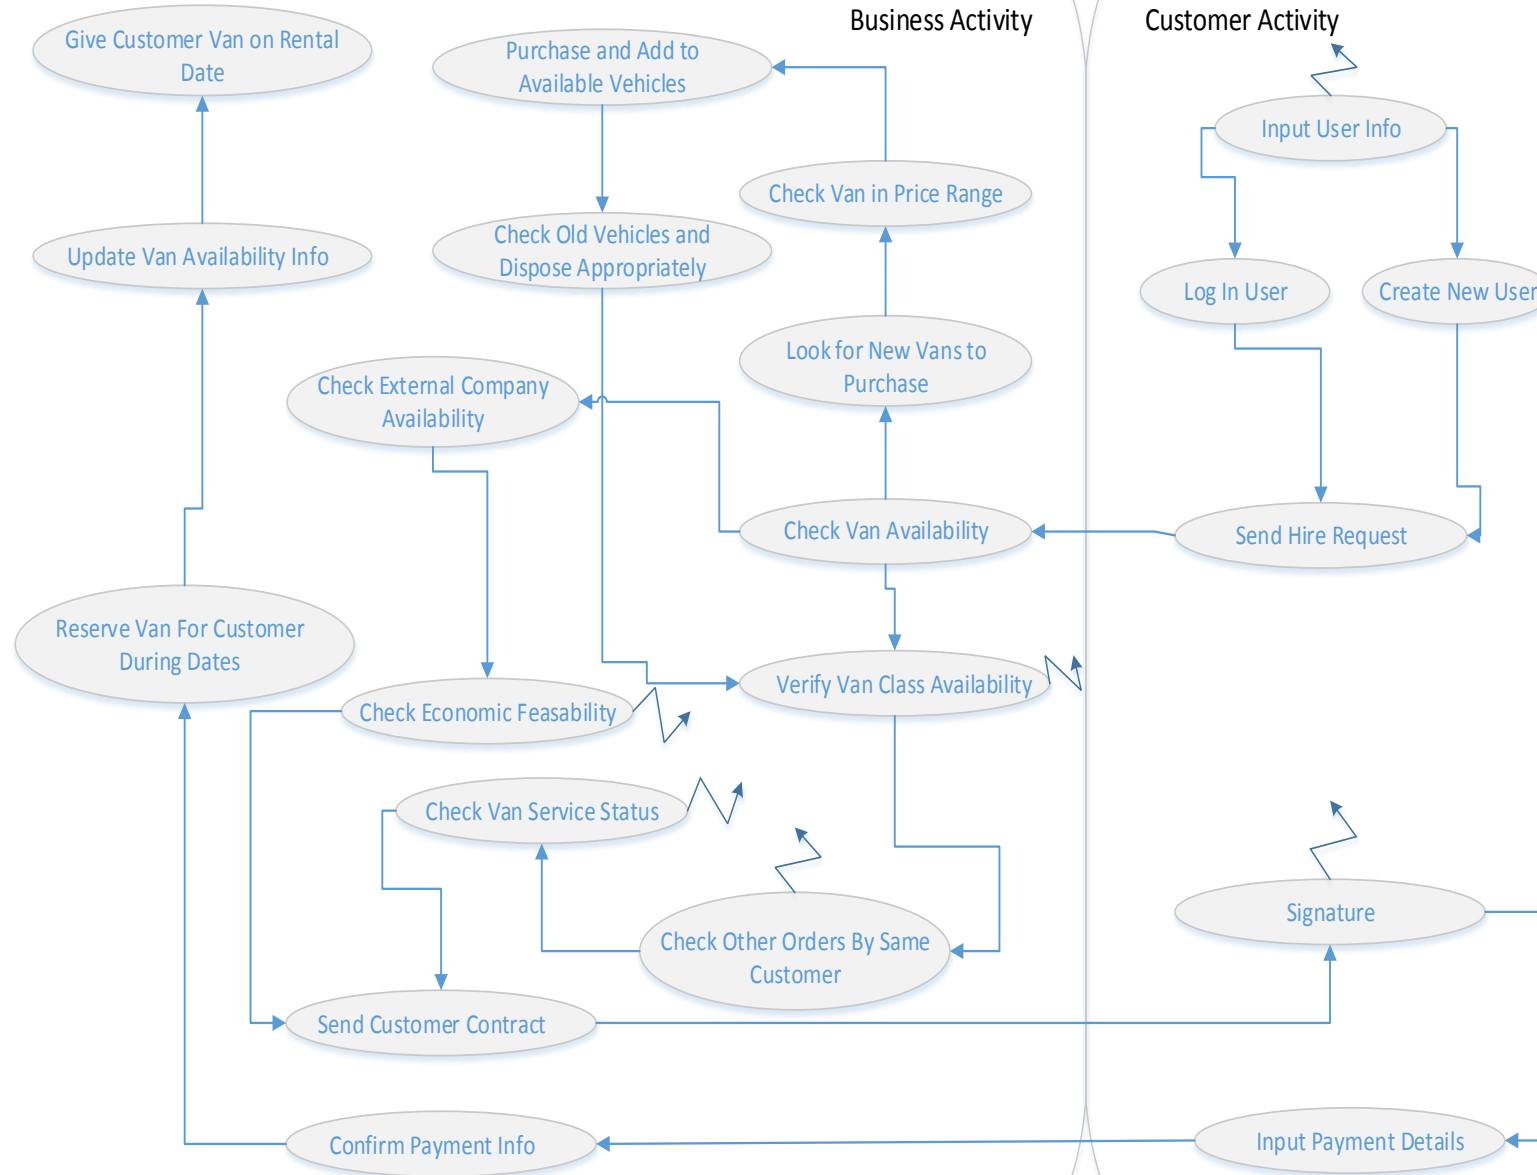

This assignment, or any part of it, has not been previously submitted by me or any other person for assessment on this or any other course of study. I have read and understood the referencing guidelines found at <http://www.library.dcu.ie/citing&refguide08.pdf> and/or recommended in the assignment guidelines.

I understand that I may be required to discuss with the module lecturer/s the contents of this submission.

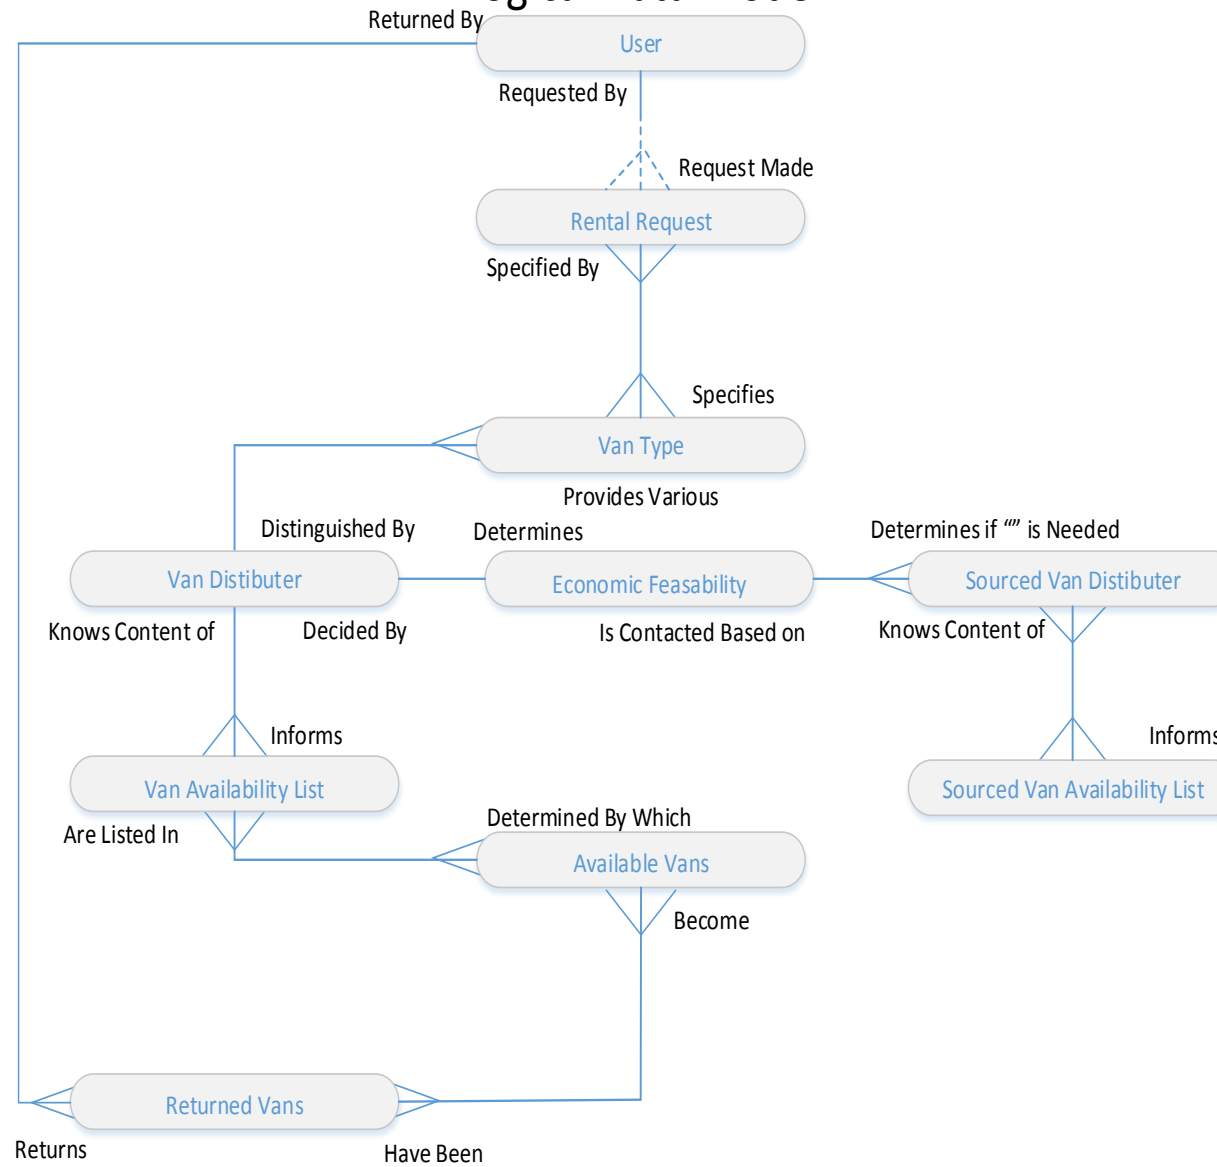

I/me/my incorporates we/us/our in the case of group work, which is signed by all of us.

Function Definition

Name: Check for Existing User
Process ID: 1.1
Description: Checks the known list of user details to see if the details submitted by the current user match and of the known users.
Parent Process: Take Order
Data Flow: Current User Info, Known User Info
Processed By: Automated Rental System

Name: Get User Request
Process ID: 1.2
Description: If the current user already exists 1.2a is ignored and the user is asked what type of van they would like and when. If the user does not exist the same is done, however, the user is first added to the user database and creates an account.
Parent Process: Take Order
Data Flow: Current User Info, Known User Info, Rental Request File/Document
Processed By: Automated Rental System

Input/Output

Process Description

Process 1: Van Return

Description: Requires renter to return Van at designated date. Makes sure that the van has been returned on time and does not require a late fee as well as having no damages. It also checks the service schedule and decides if the van can be added back onto the available vans list. If so the van is returned to the available vans list. Assuming no damages are present the customer need not be charged any further.

Process 2: Order Request

Description: This is a request from the user for permission to place an order for a van rental. The request must contain a type of van specification as well as the length of the rental. The system checks the availability of all the vans of the given type during the rental period and should one be available a contract will be presented for signing by the user as well as a request for payment details to finalize the rental confirmation.

Data Flow

Data Flow: User Details

Consists of: Name, Date of Birth, Proof of Legal ability to drive, Payment info,
Current Rentals, Requested Van type, Date of rental

Processed By: Van Rental and Allocation System

Entity Description

Entity Name: User			
Description: Potential customer ordering a van rental via the rental system			
Attribute	Primary Key	Foreign Key	Mandatory/Optional
Name	Yes		Mandatory
